

MULTI TIMEFRAME APPROACH

1 HOUR
(Mother Wave)

15 MINUTE
(Support & Resistance)

3 MINUTE
(Entry Zone – 9 EMA Strategy)

EXECUTE TRADE
(Align • Confirm • Execute)

STEP 1: 1 HOUR – MOTHER WAVE (MARKET STRUCTURE)

- 1 Identify Mother Wave on 1 Hour chart.
- 2 Check if current price is inside or outside the Mother Wave (high to low range).
- 3 IT WILL FURTHER DIVIDES INTO 4 CASES
- 4 Draw Fibonacci on the Mother Wave and check where current price lies.

- Bullish Mother Wave → Draw Fib from Bottom to Top (1 = Low, 0 = High)
- Bearish Mother Wave → Draw Fib from Top to Bottom (1 = High, 0 = Low)

4 MARKET CONDITIONS (CASES)

1. INSIDE BULLISH

- Current price is inside the Mother Wave range (between its high and low).
- The waves forming inside the Mother Wave are bullish (making Higher Highs and Higher Lows).
- Meaning → price is consolidating within the Mother Wave but with bullish momentum.

2. INSIDE BEARISH

- Current price is inside the Mother Wave range.
- The waves forming inside the Mother Wave are bearish (making Lower Lows and Lower Highs).
- Meaning → price is consolidating within the Mother Wave but with bearish momentum.

3. OUTSIDE BULLISH

- Current price has broken outside the Mother Wave range (above the Mother Wave high).
- The move outside is bullish.
- Meaning → price has broken out upward → weak/breakout pattern.

4. OUTSIDE BEARISH

- Current price has broken outside the Mother Wave range (below the Mother Wave low).
- The move outside is bearish.
- Meaning → price has broken down → weak/breakout pattern.

FIBONACCI LEVELS ON MOTHER WAVE

-1.618	=	Extended Target
-1	=	Target Level
-0.236 to 0.236	=	Trap Zone (No Trading)
0	=	High
0.382	=	Initial support level where retracement can happen and trade continues in Mother Wave direction
0.5	=	Middle point of Mother Wave, can act as support sometimes
0.618	=	Final point where reversal can happen and trade should be planned according to Mother Wave direction
0.786	=	If price touches 0.786 already high chance of sideways movement
1	=	Low

ALERTS (ON 1 HOUR CHART)

When current price touches any of the three key Fibonacci levels (0.382, 0.500, 0.618) for the first time → **“GET READY FOR TRADE”**

When current price is sitting between any two of these key levels → **“CURRENTLY IN BETWEEN SWING – CHECK IF PRICE MOVED ABOVE OR BELOW CURRENT LEVEL”**

TRAP ZONE RULES

1. PRICE INSIDE TRAP ZONE (-0.236 to 0.236)

- Switch to 15 minute Support & Resistance levels for guidance.
- Price touching upper side (-0.236) → bias is **SHORT**
- Price touching lower side (0.236) → bias is **BUY**

2. PRICE BREAKS BELOW 0.236 (BULLISH MOTHER WAVE)

Price has broken out of the lower side of the Trap Zone. Two opportunities arise:

- 1 Sell from 0.236 breakdown → ride the move down till important Fib levels (0.382 → 0.500 → 0.618)
- 2 Buy at those important Fib levels (0.382, 0.500, 0.618) → in the direction of the bullish Mother Wave

3. PRICE BREAKS ABOVE 0.236 (BEARISH MOTHER WAVE)

Price has broken out of the upper side of the Trap Zone. Two opportunities arise:

- 1 Buy from 0.236 breakout → ride the move up till important Fib levels (0.382 → 0.500 → 0.618)
- 2 Sell at those important Fib levels (0.382, 0.500, 0.618) → in the direction of the bearish Mother Wave

STEP 2: 15 MINUTE – SUPPORT & RESISTANCE

Previous Swing Highs → act as Resistance

Previous Swing Lows → act as Support

Areas where price has repeatedly reversed → key S&R zones

STEP 3: 3 MINUTE – ENTRY ZONE (9 EMA STRATEGY)

IN AN UPTREND (BUY SETUP)

- ✓ Wait for price to pull back towards the 9 EMA band.
- ✓ Once price touches or comes close to 9 EMA Low and shows signs of reversal → this becomes the entry zone.
- ✓ A valid Higher Low or a Bullish Fractal forming near the EMA band confirms the entry.

IN A DOWNTREND (SELL SETUP)

- ✓ Wait for price to pull back towards the 9 EMA band.
- ✓ Once price touches or comes close to 9 EMA High and shows signs of reversal → this becomes the entry zone.
- ✓ A valid Higher High or a Bearish Fractal forming near the EMA band confirms the entry.

The 3 minute entry zone acts as the final trigger — it is the point where all three timeframes align and the trade is executed with full confirmation from the top down analysis.

INTERNAL WAVE STRENGTH OR WEAKNESS

IN UPTREND (BULLISH MOTHER WAVE)

STRONG WAVE (HIGH PROBABILITY)

- ✓ Price approaches 0.382 or 0.618 level
 - ✓ Price is currently trading above that level
 - ✓ Price continues upward without closing below the Fib level
- This confirms strong bullish momentum → higher probability of trade success

WEAK WAVE (LOW PROBABILITY)

- ✗ Price approaches 0.382 or 0.618 level
 - ✗ Price closes below that Fib level once again
- This signals weakness → market likely to go sideways or less probable to reach target

IN DOWNTREND (BEARISH MOTHER WAVE)

STRONG WAVE (HIGH PROBABILITY)

- ✓ Price approaches 0.382 or 0.618 level
 - ✓ Price is currently trading below that level
 - ✓ Price continues downward without closing above the Fib level
- This confirms strong bearish momentum → higher probability of trade success

WEAK WAVE (LOW PROBABILITY)

- ✗ Price approaches 0.382 or 0.618 level
 - ✗ Price closes above that Fib level once again
- This signals weakness → market likely to go sideways or less probable to reach target

SUMMARY – THE COMPLETE PROCESS

1 HOUR (Mother Wave)

- Identify Mother wave
- Determine Case (1 of 4)
- Draw Fibonacci
- Check Alerts
- Apply Trap Zone Rules

15 MINUTE (Support & Resistance)

- Mark Key Support & Resistance Levels
- Price Action

3 MINUTE (Entry Zone – 9 EMA)

- Use 9 EMA Strategy
- Find Entry Zone
- Confirm with Price Action (HL/HH or Fractal)

EXECUTE TRADE (Align • Confirm • Execute)

- Enter with confidence when all timeframes are aligned.

- ✓ Trade in the direction of the Mother Wave
- ✓ Respect Trap Zone Rules
- ✓ Use S&R for confirmation
- ✓ Enter with 9 EMA precision
- ✓ Manage risk and protect capital
